

StoredIQ's solution is unique on several fronts, it allows the legal and IT teams to work closely together early in the process; it doesn't demand any movement of data to analyze the content prior to collection and preservation, and it ensures precise access to the right set of data.

Intelligent Information Management for Law Firms and Corporate Counsel

The amended Federal Rules of Civil Procedures (FRCP), coupled with an increase in corporate lawsuits and regulatory inquiries, and the tremendous growth in electronically stored information (ESI) has created significant pressure on corporate legal departments and their outside counsel to organize and develop a more holistic, proactive litigation and compliance strategy; without one, the costs and risks associated with corporate litigation will continue to escalate, significantly impacting the ability of the corporation to succeed in the marketplace.

The ability to develop an informed case strategy is of critical importance in a world where eDiscovery costs routinely run in the millions of dollars, even before attorney review begins. The cost of retrieving and filtering ESI from a vast array of unmanaged information sources is prohibitive, and an inability to demonstrate the application of consistent retention and disposition policies can result in hefty legal penalties

Addressing Corporate Governance and eDiscovery with StoredIQ

StoredIQ addresses the eDiscovery and Corporate Governance processes at the earliest stages. The StoredIQ Intelligent Information Management (IIM) Platform provides deeper and broader insight into responsive ESI earlier in the process, allowing legal counsel to quickly discover case facts, and rapidly cull-down collected

information to the smallest, most precise, and legally defensible data set, in a completely auditable manner.

Once the responsive data set has been agreed upon, StoredIQ then enables counsel to preserve and collect precisely what is needed for review and automatically creates review-ready load files for seamless import into popular litigation review tools. This eliminates over-collection, qualitatively enriches the data set, and ultimately reduces the downstream costs of review and analysis.

Benefits of the StoredIQ Information Management Platform for Legal Counsel

- **Cost Reduction** — eliminate over-collection and intelligently reduce the amount of data requiring expensive review and analysis.
- **Risk Mitigation** — reduce the risk of spoliation and maintain a defensible, auditable preservation and collection process, with full chain of custody, eliminating potential process attacks.

BENEFITS FOR GENERAL COUNSEL

Gain faster, earlier access to matter-relevant data to make more informed legal decisions.

Reduce legal risk by locating, preserving and collecting information with a legally defensible method.

Improve insight into specific matters or investigations with deeper analytics.

Increase control of the eDiscovery process.

Preserve the appropriate amount of data.

Develop proactive litigation strategies to reduce costs.

BENEFITS FOR LAW FIRMS

Gain a deeper understanding of client matters sooner.

Eliminate outside vendor costs leaving more of the litigation budget for legal fees.

Increase accuracy of cost estimates for client matters.

Improve legal decision making with more efficient access to corporate data.

Strengthen your positions at Rule 26(f) conferences with deeper analytics.

- Speed and Precision — perform *Very Early Case Analysis* by quickly and accurately identifying matter-relevant data in the “wild”, even prior to preservation.
- Deeper Insight — gain acute perspectives of data with the automatic production of data topology maps and key word heuristic reporting, especially critical during the meet-and-confer process.
- Simplified Collaboration — enables seamless cooperation between in-house counsel and outside legal teams through anytime, anywhere web access to the platform to perform an initial analysis of the data, and identify and examine key documents.

StoredIQ's Intelligent Information Management Platform

As a holistic information management platform, StoredIQ also addresses the requirements surrounding records management, and provides a comprehensive governance, risk, and compliance (GRC) solution for the enterprise. StoredIQ can be used to implement and execute records retention and disposition policies through automatic classification, further eliminating legal risks and costs. Previously unstructured data can be classified and copied or moved to inexpensive retention servers, or deleted, depending on the compliance and governance rules specific to the document type.

The StoredIQ IIM platform is delivered as a software-based solution that installs within a corporation's firewall to efficiently manage the eDiscovery processes from identification to analysis. The system connects to a broad set of data sources, including email and archive systems, file servers, desktops/laptops, content management systems and storage systems, all without the use of additional agents or gateways.
