

StoredIQ Healthcheck

Overview

Following the deployment of StoredIQ Intelligent Information Management Platform into the enterprise environment, the business and technical needs, as well as the IT environment, may evolve. StoredIQ Healthcheck Services are targeted at these existing deployments to ensure that StoredIQ products continue to be optimally and effectively employed, and yield maximum return on investment.

The Healthcheck Services process is divided into five essential steps that begin with a complete analysis of the current environment and result in fully documented recommendations and conclusions.

Business Review

The Healthcheck Services process begins with a complete *Business Review*, gathering any updated business and technical requirements, and identifying any existing issues that may be outstanding with the current configuration.

System Review

During a *System Review*, the StoredIQ appliance is deeply inspected, particularly the hardware and software configurations, with a full examination of the audit logs. Additionally, all associated business and technical processes are reviewed, with particular focus on the eDiscovery and the Information Management processes.

Environment Review

Over time, an enterprise IT infrastructure will evolve to meet changing business needs. The *Environment Review* will investigate the updated ecosystem, looking specifically at historical data growth, system capacity, data sources, network performance, and other environmental factors.

Analysis and Conclusions

At the end of the thorough Review process, StoredIQ product and industry experts will perform a holistic assessment, culminating in formal conclusions and recommendations for the organization.

Documentation

All results are fully documented and deliverables include *Health Check Results*, *StoredIQ System Administration Runbook*, relevant *StoredIQ Best Practices Guides*, and a customer account plan.

Key Benefits

- Maximize return on investment
- Receive guidance from product and industry experts
- Realize optimal performance of StoredIQ products
- Utilize StoredIQ IIM Platform for updated use cases
- Ensure most efficient and effective use of StoredIQ products
- Receive customized best-practices and administration runbook
